Head First Python (3e) - Code Snippets Index

Unlike the 3rd edition's included index (which indexes topics, keywords, names, concepts, and so on), this index presents page locations for the book's usages of Python's built-in functions, language keywords, magics, and standard library modules. The page numbers shown below specifically refer to the book's code snippets (as opposed to its descriptive content). Note: large chunks of displayed code (for example, the "Ready Bake Code" elements and code listings) are typically not indexed here.

Built-in functions (BIFs)
